SPEED LOGS & ECHO SOUNDERS

SIMPLIFYING INSTALLATION
AND MINIMIZING COST

Consilium
Consilium is a well established company within the marine industry, with a long experience from developing innovative and high quality products, such as the SAL speed logs and echo sounders.

When choosing a Consilium product you will get a type approved product together with a life time commitment from an advisory partner, providing first class support and excellent service.

Consilium has an installed base of 75,000 fire and gas detection systems worldwide in the marine, oil and gas, transport and building sectors. Our journey began in 1912 with speed logs, and since then we have been driven by innovation. In 1959 and 1967 we introduced our gas and fire detection systems which became important milestones.
Consilium offers a wide selection of speed logs and echo sounders that fulfill all regulations and requirements.

Consilium’s wide selection of SAL speed logs offers both relative and true speed log versions including the world’s first type approved combined speed log and echo sounder system.

### SAL speed logs and Echo sounders solutions from Consilium

All systems are approved for vessels up to 50,000 GT.
The T2+, T2E, E1 and E2 are also approved for vessels over 50,000 GT.

### System overview of SAL T2E

Example of a full docking log and double echo sounder functionality with the unique SAL T2+ transducer in the bow for STW, SOG and navigational depth and the E2 echo sounder in the aft. Note: only two hull penetrations needed.
Choose from a comprehensive range of SAL speed logs

Consilium has thoughtfully extended the speed log product range to ensure the ability to provide the right solution, regardless of if you are building a new ship or working on a retrofit. Let us be your advisory partner, providing a high quality product that fulfills your needs and values.

Modern SAL speed logs use the ultrasonic measuring principle and are therefore referred to as Doppler type speed logs.

Type approved for vessels up to 50.000 GT

Consilium’s SAL R1a is a one-axis relative speed log, measuring speed through water in longitudinal direction ahead and astern.

The SAL R1E is a cost efficient solution that fulfills the SOLAS regulation for both speed log and echo sounder (E1 version).

The SAL T3 solution combines the speed log features with echo sounding, measuring longitudinal relative speed through water as well as two-axis true speed over ground.

Type approved for all vessels

Consilium’s SAL T2E is a cost efficient solution with both speed log (T2+) and echo sounder (E2). It has dual echo sounders, speed through water (STW) and speed over ground (SOG) speed logs, small bottom parts and only requires two hull penetrations. The SAL T2+ transducer also delivers approved depth information (150 kHz sounder) to the E2 echo sounder display.

The SAL T2+ solution is a unique docking and dual axis speed log. The SAL T2+ measures longitudinal relative speed through water (STW) as well as two-axis true speed over ground (SOG). The transducer has both a separate device for STW and a separate device for SOG and therefore requires only one hull penetration.
SAL R1a Easy Tank - The easiest SOLAS Speed Log to install

SAL R1a Easy Tank is the fourth generation acoustic correlation SAL speed log for measuring relative speed – speed through water (STW). The speed log is designed to meet requirements as specified by authorities and shipowners. Its performance exceeds the various IMO specifications and has proven reliability in many thousand installations worldwide.

General description

The basic version of SAL R1a includes bottom arrangements, transducer, and electronics unit, all mounted in the bow area. SD displays as selected are installed in the bridge area.

The unit provides serial output signal according to IEC 61162-1/NMEA 0183 as well as 200 pulses per NM and analogue voltage output. Therefore it can be integrated and displayed in many different ways and systems.

Main features

• Closed ended installation - no need for water tight compartment or piping above sealine.
• Easy to install, with only a few mechanical parts and light weight bottom parts. The transducer mounting is made from the inside of the hull.
• Safe due to the rugged mechanical design and water tight cable.
• Pressure tested and approved according to PN16 (24 bar, 240 m).
• High performance because of the proven Acoustic Correlation technology.
• Space saving with the small and compact bottom parts.
• Easy set-up and calibration procedures from the bridge SD4 displays.
• Flexible calibration allows very accurate reading over the speed range.

Construction

• The electronics are mounted on a circuit board enclosed in a splash proof steel box. Cable glands are provided in the bottom plate of the box.
• Bottom arrangement with Easy Tank is available for both aluminium and steel hull construction.
• Watertight cable enables installation in wet and demanding environments.
• High watertight integrity and resistance to damage.

Installation in three steps:

1: Mount the flange in hull
2: Fasten the transducer to the flange with the bolts
3: Installed
Consilium navigational echo sounder selection

Consilium offers two types of reliable and low cost navigational echo sounders, the E1 and the E2. They are both easy to install and to operate and have been approved according to MED and found to be in compliance with IMO regulations. The E1 echo sounder is included in the SAL R1E package and the E2 in the SALT2E package.

Technical information

SAL speed logs - Speed Through Water (STW)

- Speed range: ±50 knots sensed water speed
- Speed inaccuracy: 0.1 knot or 0.5% whichever is greater
- Distance inaccuracy: <±0.5% of travelled distance in water
- Minimum water depth: 3 m below transducer

SAL speed logs - Speed Over Ground (SOG)

- Speed range: ±40 knots in any direction
- Depth range: 2-250 m below transducer
- Speed inaccuracy: 0.1 knot or 0.5% whichever is greater
- Traveled Distance Inaccuracy: 2-10 NM ±0.2%, 10-50 NM ±0.1%, >50 NM ±0.05%

E1 - single-frequency navigation sounder

- Transducer frequencies: 50 or 200 kHz (to be user-specified)
- Screen: 5.7" LED-backlit LCD, daylight viewing
- Depth ranges: 5 to 1000m in 8-range steps
- Transmit power: 600W RMS
- Data storage: Up to 12 hours

E2 - compact high-end, two unit model

- Transducer frequencies: 50 kHz + 200 kHz
- Display: 8" VGA TFT-LCD, daylight viewing
- Depth ranges: 5 to 1000m in 8-range steps
- Transmitter: 1 kW max
- Data storage: Up to 24 hours

Benefits with a solution from Consilium

- A minimum of hull penetrations
- Fulfil the new SOLAS 2014 MSC.334(90)
- Small transducers
- Cost efficient solutions
- Easy to install
- No divers needed during retrofit
- Low maintenance
- High quality
- High accuracy by correlation principle
- Non reliant on easily interfered satellite systems
- Flexible retrofit solutions
- 24/7 worldwide support

Consilium’s products are certified by the major classification societies

Consilium’s wide selection of speed logs and echo sounders simplifies installation and minimizes the total cost.

Unique solutions by Consilium

Consilium’s SAL R1E, SAL T2+ and SAL T2E are unique solutions, requiring a minimized number of hull penetrations, always fulfilling the SOLAS MSC.334(90) requirement.

Traditional solutions

Traditional solutions require between two and four hull penetrations.
FOR ALL THOSE MOMENTS WHEN SAFETY MATTERS

Consilium is a producer of safety technologies for the marine, oil and gas, transport and building sectors.

Our commitment goes beyond the products: We protect the lives of mothers and fathers, sisters and brothers, colleagues and friends. With representation in more than 55 countries in all time zones, we are always close to you.
